

Question 6

(a)

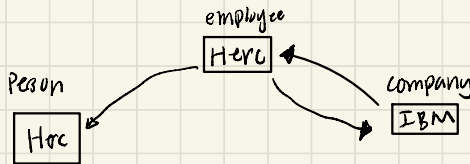

(b) i

Person
Here

Company
IBM

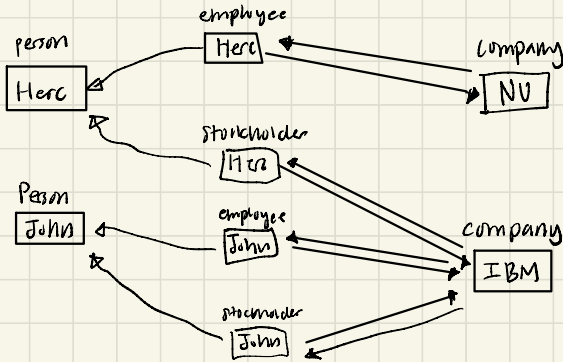

No, does not confirm since even though the objects are instantiated, company requires at least one employee and Here is not that person

ii

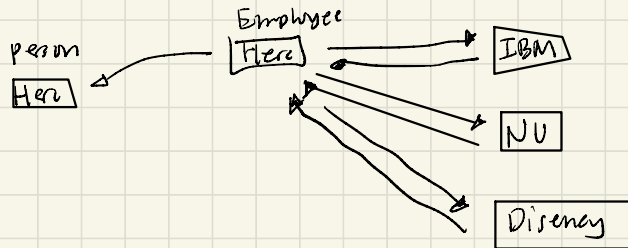

yes, all the objects are instantiated correctly, and Here is a valid employee of IBM, and Here is only working for 1 company (IBM)

iii

yes. In our classes, a person can be both an employee and a stockholder. All the rules are followed, each person only works at one company, and each company has minimum employees, and multiple stockholders can exist at the same company

iv.

No. Each employee can only work at one company. In our object snapshot, this is not the case since the drawing is trying to say that Herc is employed at 3 companies
